

# Converting Non-Imputed Dates (for SDTM Data Sets) With PROC FCMP

Noory Kim

17 October 2016

The Center of Excellence for Clinical Trial Data

# SDTM data sets require ISO8601 date formats.

Raw data sets may have non-ISO8601 formats

- *DDMMMYYYY*
- *MM-DD-YYYY*

SDTM\* data sets require ISO8601 formats

- *YYYY-MM-DD*
- *YYYY-MM*
- *YYYY*

\*Study Data Tabulation Model

## PUBLIC SERVICE ANNOUNCEMENT:

OUR DIFFERENT WAYS OF WRITING DATES AS NUMBERS CAN LEAD TO ONLINE CONFUSION. THAT'S WHY IN 1988 ISO SET A GLOBAL STANDARD NUMERIC DATE FORMAT.

THIS IS *THE* CORRECT WAY TO WRITE NUMERIC DATES:

**2013-02-27**

THE FOLLOWING FORMATS ARE THEREFORE DISCOURAGED:

02/27/2013 02/27/13 27/02/2013 27/02/13  
20130227 2013.02.27 27.02.13 27-02-13  
27.2.13 2013. II. 27.  $27\frac{1}{2}$ -13 2013.158904109  
MMXIII-II-XXVII MMXIII  $\frac{\text{LVII}}{\text{CCCLXV}}$  1330300800  
 $((3+3) \times (111+1) - 1) \times 3 / 3 - 1 / 3^3$  2013 Miss  
10/11011/1101 02/27/20/13  $\begin{matrix} 2 & 3 & 1 & 4 \\ 0 & 1 & 2 & 3 & 7 \\ 5 & 6 & 7 & 8 \end{matrix}$

# Target output of the function to be defined

Input	Target Output	Rule
17OCT2016	2016-10-17	
17Oct2016	2016-10-17	Ignore case for month
UNOCT2016	2016-10	
UNUNK2016	2016	
17UNK2016	2016	Omit day if month unknown
17OCTUKUK	<i>null</i>	Omit day and month if year unknown

# PROC FCMP functions are user-defined functions.

Once a PROC FCMP function is defined, compiled, and located, it can be invoked just like a built-in SAS function.

```
data two;  
  set one;  
  length date_iso8601 $10;  
  date_iso8601 = convertdate(date_date9);  
run;
```

# PROC FCMP syntax is similar to DATA step syntax.

Example: To avoid the truncation of values of character variables, use LENGTH statements (just as you would in a DATA step).

FCMP cannot use everything a DATA step can, including

- the IN operator
- the ?? format modifier

# Output 1: The Main Example

The NOTDIGIT() function detects missingness codes having at least one non-numeric character.

Obs	date_9	date_iso8601
1	17OCT2016	2016-10-17
2	17Oct2016	2016-10-17
3	UNOCT2016	2016-10
4	UNUNK2016	2016
5	17UNK2016	2016
6	17OCTUNKN	
7	99JAN2016	2016-01-99
8	31FEB2016	2016-02-31

# Output 1: The Main Example

However, the NOTDIGIT() function is not sufficient to detect missingness codes that are strictly numerical.

Obs	date_9	date_iso8601
1	17OCT2016	2016-10-17
2	17Oct2016	2016-10-17
3	UNOCT2016	2016-10
4	UNUNK2016	2016
5	17UNK2016	2016
6	17OCTUNKN	
7	99JAN2016	2016-01-99
8	31FEB2016	2016-02-31

# Output 2: The Main Example, Modified

The paper discusses two methods for preventing nonexistent dates.

Obs	date date9	date iso8601
1	01JAN2016	2016-01-01
2	01jan2016	2016-01-01
3	17OCT2016	2016-10-17
4	UNOCT2016	2016-10
5	UNUNK2016	2016
6	UNUNKUKUK	
7	17UNK2016	2016
8	17OCTUKUK	
9	99JAN2016	<b>2016-01</b>
10	31FEB2016	<b>2016-02</b>

# Preventing Non-existent Dates

---

Method 1: Compare the date with the last existing date of the same month

- use the INTNX() function

```
year = input/yyyy, 8.);  
month = input(mm, 8.);  
day = input(dd, 8.);  
  
month_start_date = mdy(month, 1, year);  
month_end_date   = intnx('month', month_start_date, 0, 'end');  
month_end_day    = day(month_end_date);  
  
if day > month_end_day then outdate = yyyy || '-' || strip(mm);  
else outdate = yyyy || '-' || strip(mm) || '-' || dd;
```

# Preventing Non-existent Dates

---

Method 2: Check if date can be converted to a non-missing numeric date value

- use the ANTDTE10. format

```
outdate = yyyy || '-' || strip(mm) || '-' || dd;
```

```
outdate_numeric = input(outdate, anydte10.);
```

```
if outdate_numeric < .z then outdate = yyyy || '-' || strip(mm);
```
